VARIPHONE

Safe and sound hearing

Experience your passion for shooting sport as never before with Vario hearing protection

Vario is very suitable for all kinds of impulse sounds, professional or leisure. It is an active modular hearing protection consisting of a custom made earmold and a replaceable electronic module (choice of Revolution 2, 4 or 6).

The earmold is made of a soft silicone material that offers optimal wearing comfort. Each module is equipped with a multifunction button that allows you to quickly change program with a simple click on this button.

All electronic modules by Vario, with a number of predefined programs, provide you with the appropriate protection against impact noise depending of your situation. The volume is optimized for every individual program, so no additional volume control is required. Typical battery life is up to 120 hours, but will vary depending on ambient sound levels and environmental conditions.

Overview electronic modules

| | Revolution 2 | Revolution 4 | Revolution 6 |
|--|--------------|--------------|--------------|
| Whisper: focus and concentrate | | ● | ● |
| Quiet: concentrate and awareness environment | ● | | ● |
| Social: communication whilst shooting | ● | ● | ● |
| Clay: speech/trap profile - wind noise reduction | | ● | ● |
| Game: speech/game profile - wind noise reduction | | ● | ● |
| Game keeper: awareness environment: hear everything | | | ● |

Variphone develops and manufactures custom made hearing protectors and communication devices for the most diverse requirements.

Excessive exposure to impact noise, such as shooting activities, can lead to irreversible hearing loss, resulting in reduced speech understanding. It is therefore important to wear your hearing protection correctly and consistently to avoid harmful consequences.

Have your hearing protectors checked annually

Make an annual appointment to have your hearing protection checked, this is important as the ear canal keeps changing over the years. As long as there is a good fit, of course the hearing protectors should not be replaced.
